

Attention for installing the Cutting Master 2 to the Mac OS X

There are 2 types of Cutting Master. One is the old type of Cutting Master that name is "Cutting Master", the other is a new Cutting Master that name is "Cutting Master 2".

When you install the Cutting Master 2 on the Macintosh which currently installs the old type of Cutting Master, you need to delete the driver files of Cutting Master by following operation first before install the Cutting Master 2. After this operation, the old Cutting Master will not be able to use.

Please operate carefully. The incorrect operation may cause serious trouble on the system.

1. In case of the OS X which is later than the Mac OS10.2

- (1) Log-in with administrative privileges
- (2) Delete all " Graphtec_*****.kext " files from the System/Library/Extension folder.
- (3) The password may be asked when this operation. In this case, please input the password.
- (4) Restart the Macintosh.

2. In case of Mac OS10.2 or older.

- (1) Log-in with administrative privileges
- (2) Run Terminal from /Applications/Utilities.
- (3) Type "cd /system/Library/Extensions" then press the return key.
- (4) Type "sudo rm -rf Graphtec_*.kext" then press the return key. (The password may be asked when this operation. In this case, please input the password)
- (5) Restart the Macintosh.
